

Application No. 09/779,177
Patent No. 5,909,545
Attorney Docket No. 4T02.1-020

Sub
C2
23. (New). A method for providing on demand remote control of an application, comprising the steps of:

receiving a demand that a user at a first computer desires remote control over an application at a second computer;

5 in response to the demand, transmitting a remote control module to the first computer over a network, and

B' the remote control module enabling the first computer to remotely control the application at the second computer system without pre-installing remote control software at the first computer prior to receiving the remote control module.

10 I 24. (New). A system operative to execute the method of claim 23. 21

15 25. (New). A computer storage medium comprising computer executable instructions for performing the method of claim 23. 21

Attorney Docket No. 4T02.1-020

26. (New). A method for providing on demand remote control of an application, comprising the steps of:

transmitting from a first computer a demand indicating that a user at the first computer desires remote control over an application at a second computer;

5 in response to the demand, the first computer receiving a remote control module over a network;

the remote control module executing on the first computer to enable the first computer to remotely control the application at the second computer system without pre-installing remote control software at the first computer prior to receiving the
10 remote control module; and

establishing a communication during which the first computer remotely controls the application running on the second computer.

27. (New). A system operative to execute the method of claim 26.

28. (New). A computer storage medium comprising computer executable instructions for performing the method of claim 26.

29. (New). A method for providing on demand remote control of an application, comprising the steps of:

B
receiving a demand from a first computer indicating that a user at the first
5 computer desires remote control over an application at a second computer;

in response to the demand, transmitting to the first computer a remote control module over a network, and

the remote control module configured to execute on the first computer to enable the first computer to remotely control the application at the second computer
10 system without pre-installing remote control software at the first computer prior to receiving the remote control module.

32. (New). A method for providing on demand remote control of an application, comprising the steps of:

B
receiving a request from a first computer for remote control of an application at a second computer, the first computer system receiving and executing an on-demand remote control module enabling the first computer to remotely control the application at the second computer system without pre-installing remote control software at the first computer prior to receiving the remote control module;

running the application on the second computer; and
the second computer providing the first computer with remote control access to the application program.

35. (New). A method for providing on demand remote control of an application, comprising the steps of:

receiving a request from a first computer for remote control of an application at a second computer;

5 in response to the request, transmitting a remote control module to the first computer operable for enabling the first computer to remotely control the application at the second computer system without pre-installing remote control software at the first computer prior to receiving the remote control module;

executing the remote control module at the first computer; and
10 establishing a communication during which the first computer remotely controls the application running on the second computer.

42
I 36. (New). A system operative to execute the method of claim 35. 41

43
15 37. (New). A computer storage medium comprising computer executable instructions for performing the method of claim 35. 41
